

## OTE launches the new application for smartphones

**OTE has recently extended the producers' choice of sending data to the OTE system. The new mobile application intended for smartphones and tablets allows power producers to send data of produced and consumed electricity to the OTE information system.**

„The mobile application is dedicated to all power producers running small subsidized photovoltaic plants up to 10 kW, which have the obligation to send data regularly to the OTE system. This mainly concerns the owners of installations on the roof of family house. Thanks to this application we have extended and simplified the access of these producers to our system,“ says Igor Chemišinec, Member of the Board of Directors OTE.

The launch of the mobile application is also response to the producers' wishes expressed in a market research provided in the summer 2016. The other functions allow monitor the processing status of the sent data, download and view invoices of the paid subsidy and allow producers to receive all important news related to the OTE system and payment of the subsidy. The application is for free and available to download in the relevant application store for Android or iOS systems.

„Nowadays smartphone devices can help people travelling, shopping and relaxing. By the development of the mobile application we follow the worldwide increasing trend in use of smart technologies,“ says Vojtěch Jahoda, Head of the Subsidized energy sources department.

### **OTE, a.s.**

*OTE, a.s., (OTE) has been operating on the electricity market in the Czech Republic since 2001 and on the gas market since 2010. OTE is a provider of comprehensive services to individual participants in the electricity and gas market. Since 2002, OTE has been organizing transaction in daily and later also in intraday and block market for electricity and since 2010 also in the daily and intraday gas market. Participants in the electricity and gas market in the Czech Republic are also offered with continuous processing and exchange of data, information for clearing and financial settlement of imbalances between contractual and actual values of electricity and gas supplies and withdrawals and further OTE ensures the administrative change of the supplier of both commodities. At the same time it manages the National Register of Greenhouse Gas Emissions. Since 1 January 2013, OTE has been responsible for administering a support system to pay the support for supported energy sources.*

*OTE is in accordance with Section 20a of Act No. 458/2000 Coll., on business conditions and public administration in the energy sectors and on amendment to other laws (the "Energy Act") as amended, a license holder for the activities of a market operator that includes the electricity and gas market in the Czech Republic*

*On October 7, 2015, OTE was appointed by the Energy Regulatory Authority as a nominated electricity market operator (the NEMO), to ensure a unified daily or intraday market coupling. On October 7, 2015, Market Operator also launched market data reporting of OTE's short-term market data into the ACER database (the Agency for the Cooperation of Energy Regulators).*
